Education

UC Berkeley

Class of 2019

B.S. in Electrical Engineering & Computer Science
Tutoring Officer of Eta Kappa Nu (EECS Honor Society)

Selected Coursework

Completed by December 2017

Computer Science: Machine Learning, Algorithms and Intractable Problems, Internet Architecture

Mathematics: Discrete Math, Probability Theory, Linear Algebra, Differential Equations, Multivariable Calculus

Electrical Engineering: Information Systems I

Design: Design Methodologies, Visual Communication

Projects

VR Drone Control Simulation

Berkeley Center for Augmented Cognition

UX design of hand gestures and Unity programming of features for research project simulating drone control in Oculus Rift

Data Journalism

Daily Cal (School Newspaper)

Data collection, analysis, and visualization of newspaper articles and campus stories using Python and D3.js

Spotify Playlist Visualizer

CalHacks Project

Interactive visualizations of a user's Spotify playlist with D3.js and Node.js to identify common genres, tempos, and trends

High-Altitude Balloon

Space Technologies at Cal

Electrical design and engineering of Arduino-based sensor modules for high altitude balloon for running experiment payloads

Experience

Facebook

Data Engineering, Analytics Intern

May - August 2017

Visualized funnel analysis of hundreds of millions of user experience logs to measure and monitor engagement. Constructed data pipelines that transformed tables of 6+ terabytes in size for input into Facebook's data infrastructure. Acquired internal teams as beta users of the proof of concept and integrated the project into future product roadmaps.

UC Berkeley Haas School of Business

Research Assistant

February 2016 - May 2017

Created statistical models for novel applications of natural language processing in customer analytics. Implemented variations of semi-supervised topic modeling algorithms to improve identification of product needs. Performed exploratory analysis with text mining and data visualizations in Python to identify trends in transaction data.

HealthPals

Software Engineering Intern

May 2016 - January 2017

Developed several end to end features and schemas to support data flow through treatment monitoring application. Designed data visualizations of patients' medical data within web and mobile applications using D3.js.

Boston University Smart Lighting Center

Research Assistant

June - August 2014

Designed electronic circuit of energy harvesting optical transceiver integrating Visible Light Communications. Built proof of concept for use in Internet of Things devices.

Skills

Languages

C, C++, C#, Java, Javascript, R, Python, SQL

Data

D3.js, Hive, NumPy, Pandas, Presto, Redis

Web + Mobile

AngularJS, Android, PHP, Pyramid, React

Design

Illustrator, InDesign, InVision, XD (Adobe)
